 8 problems

1. (a) If  $G$  is a  $k$ -regular graph with  $n$  vertices, how many edges does  $G$  have?  
 (b) Draw a 3-regular graph with 11 vertices or prove that no such graph exists.
2. Recall that  $Q_3$  is the 3-cube. How many automorphisms does  $Q_3$  have? Justify your answer.
3. True or false.
  - (a) The number of spanning trees in the  $n$ -cycle is  $n$ .
  - (b) Dijkstra's algorithm applied to a connected weighted graph produces a minimum-weight spanning tree.
  - (c) Every connected bipartite graph contains a cycle of even length.
  - (d) The Petersen graph has 25 edges.
  - (e) A weakly connected digraph with  $\deg^+(v) = \deg^-(v)$  for all vertices  $v$  is strongly connected.
4. It is known that  $K_4$  has 16 spanning trees. Prove this using the Matrix Tree Theorem.
5. Let  $G$  be an acyclic digraph with vertices  $u, v, w$  consisting of  $k$  pairwise disjoint  $uv$ -paths plus  $l$  pairwise disjoint  $vw$ -paths. Consider the 2-person positional game starting at  $u$ . Under what conditions does the first player have a winning strategy?
6. It is known that  $K_n$  has  $n^{n-2}$  spanning trees. If  $e$  is an edge of  $K_n$ , how many spanning trees does  $K_n - e$  have? Justify your answer.
7. The Fibonacci numbers are 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, ... where each number is obtained by adding the previous two numbers. Let  $\phi_n$  be the  $n$ th Fibonacci number. Thus  $\phi_1 = 1$ ,  $\phi_2 = 1$ ,  $\phi_3 = 2$ ,  $\phi_4 = 3$ ,  $\phi_5 = 5$ ,  $\phi_6 = 8$ ,  $\phi_7 = 13$ , etc.
  - (a) Write a recursion formula for  $\phi_n$ .
  - (b) Solve your recursion to obtain an explicit formula for  $\phi_n$ .
  - (c) Find  $\lim_{n \rightarrow \infty} \frac{\phi_{n+1}}{\phi_n}$ .
8. Consider a weighted bipartite graph with weights as indicated:

	$y_1$	$y_2$	$y_3$	$y_4$
$x_1$	4	3	3	3
$x_2$	4	2	2	2
$x_3$	4	1	1	1
$x_4$	4	1	3	4

Use the Hungarian algorithm to find a matching of maximum weight and a weighted covering of minimum cost. Show all of the intermediate steps, including weighted coverings and the equality subgraphs which are associated with them.
